MASS BALANCE OF A XENOBIOTIC IN SOIL

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

1. Sequestered NER

2. Chemically bound

Simple systems!
Soils: mostly quantification!

NER structure??
Risk??

BioNER FROM A XENOBIOTIC IN SOIL

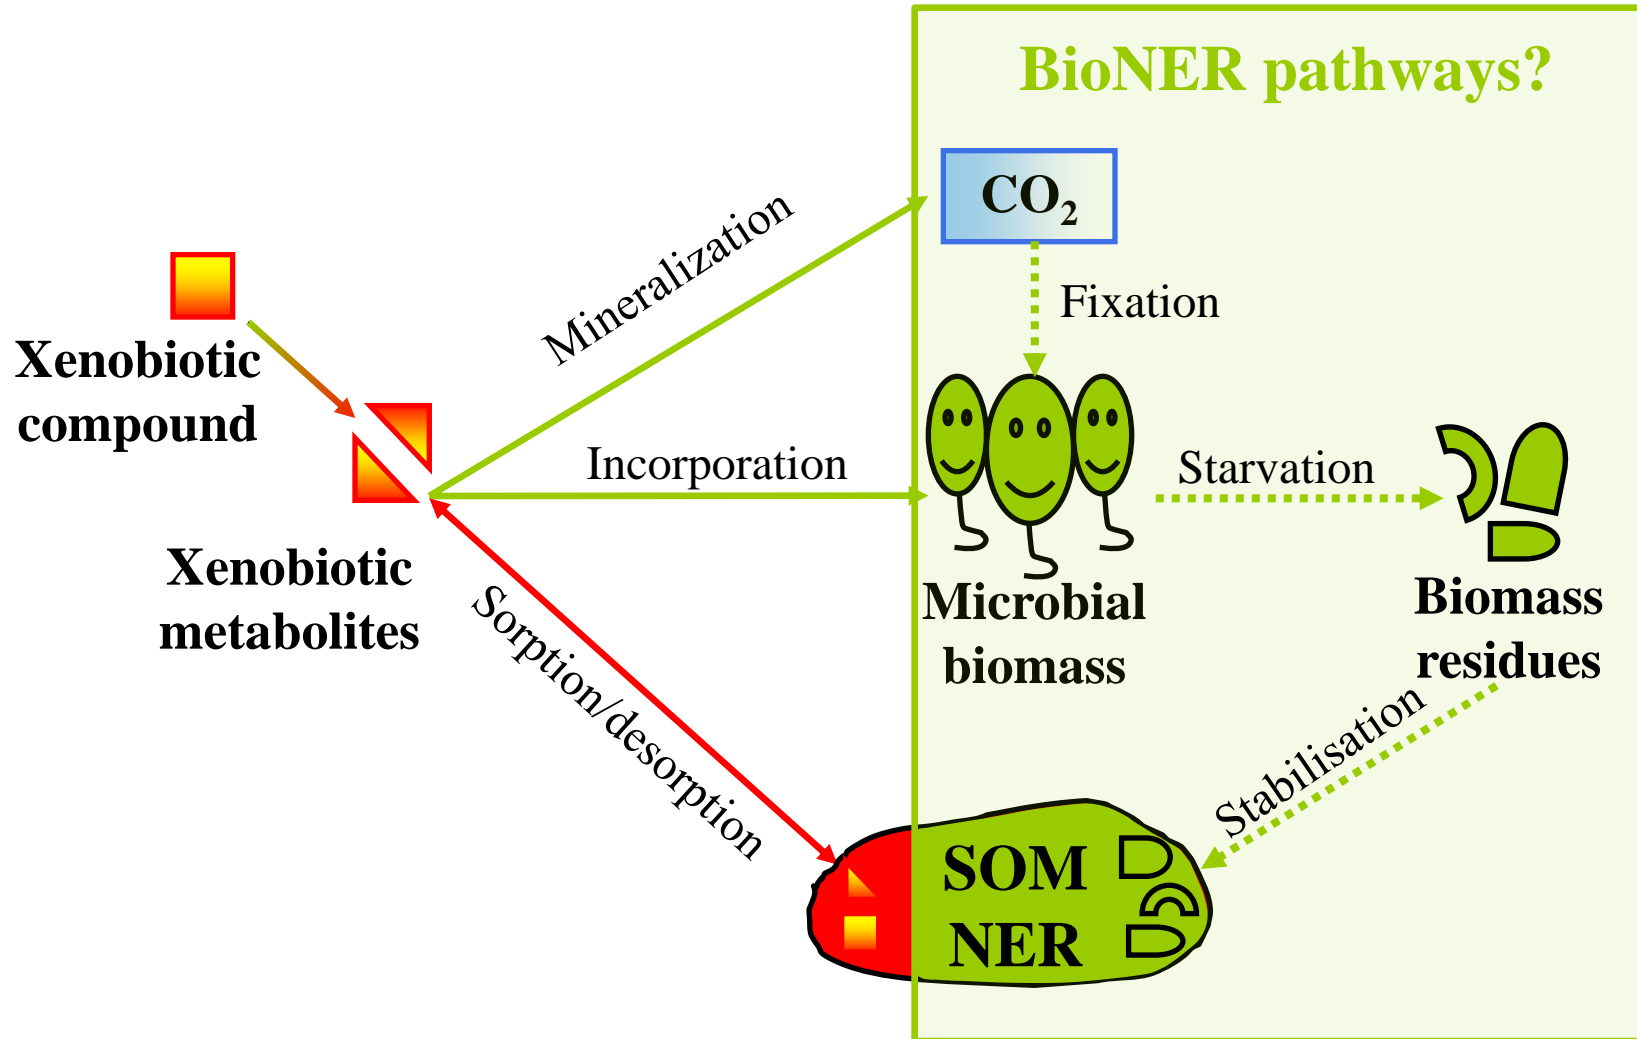

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

IBUPROFEN (IBU)

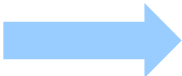

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- Anti-inflammatory and analgesic drug
- Most commonly consumed drug
- Detected in effluents and sewage sludge
- Biodegraded in soil
- High NER content  NER structure?? Risk??

¹³C₆-Ibuprofen

M_w - 206.28 g/mol

H₂O solubility - 21 mg/L

log K_{ow} - 3.5

$^{13}\text{C}_6$ -IBU EXPERIMENT

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- Darkness, 20°C; 60% of WHC
- $^{13}\text{C}_6$ -IBU: 20 mg/kg
- 2, 4, 14, 28, 59 and 90 days
- 21% clay, 68% silt, 11% sand
- Abiotic, ^{13}C -abundance controls

$^{13}\text{C}_6$ -IBU RESIDUES

Non-extractable residues (NER)
(EA-C-IRMS)

Extractable compound residues
(parent compound +
primary metabolites)

GC/MS;
GC-C-IRMS

BioNER analyses

• Living biomass:
(**PLFA** and **bioAA**)

• Total in soil:
(non-living + living biomass:
tFA and **tAA**)

^{13}C -MASS BALANCE ($^{13}\text{C}_6$ -IBU)

INTRODUCTION

EXPERIMENTAL

RESULTS

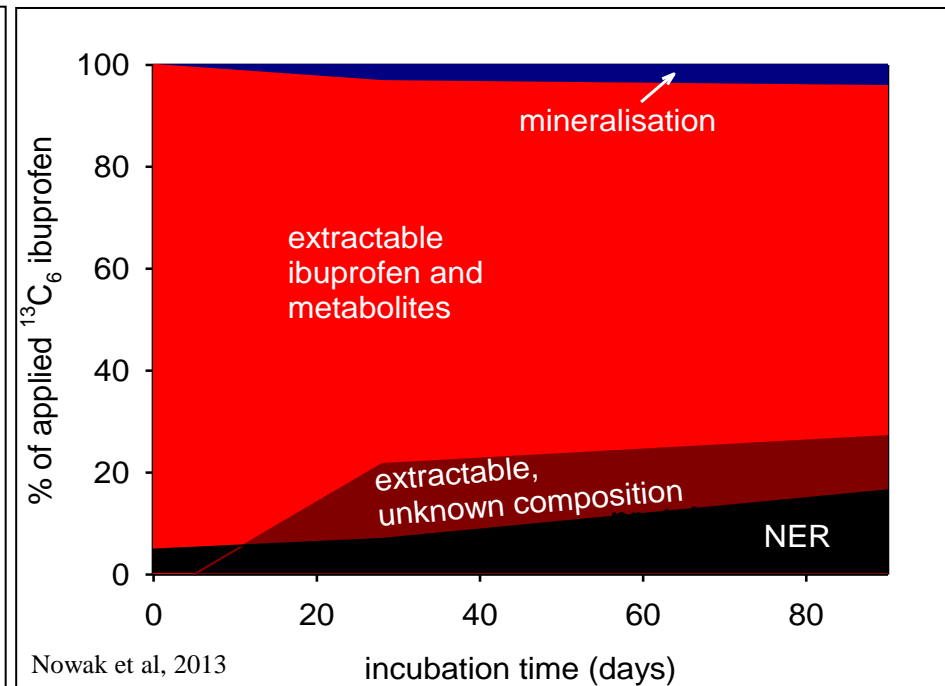

CONCLUSIONS

PLANS...

BIOTIC

ABIOTIC

- **Mineralisation: high**
- **NER: high** → **bioNER?**
- ^{13}C -IBU + metabolites: ↓

- **Mineralisation: low**
- **NER: low** → time dependant
- ^{13}C -IBU + metabolites: high

NER = microbial activity!

INCORPORATION OF ^{13}C INTO FA and AA

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

FATTY ACIDS

Nowak et al, 2013

- PLFA: fast
- PLFA: ↓

AMINO ACIDS

Nowak et al, 2013

- bioAA: fast
- bioAA: ↓
- **tAA: 27%!**

^{13}C INCORPORATION INTO BIOMASS

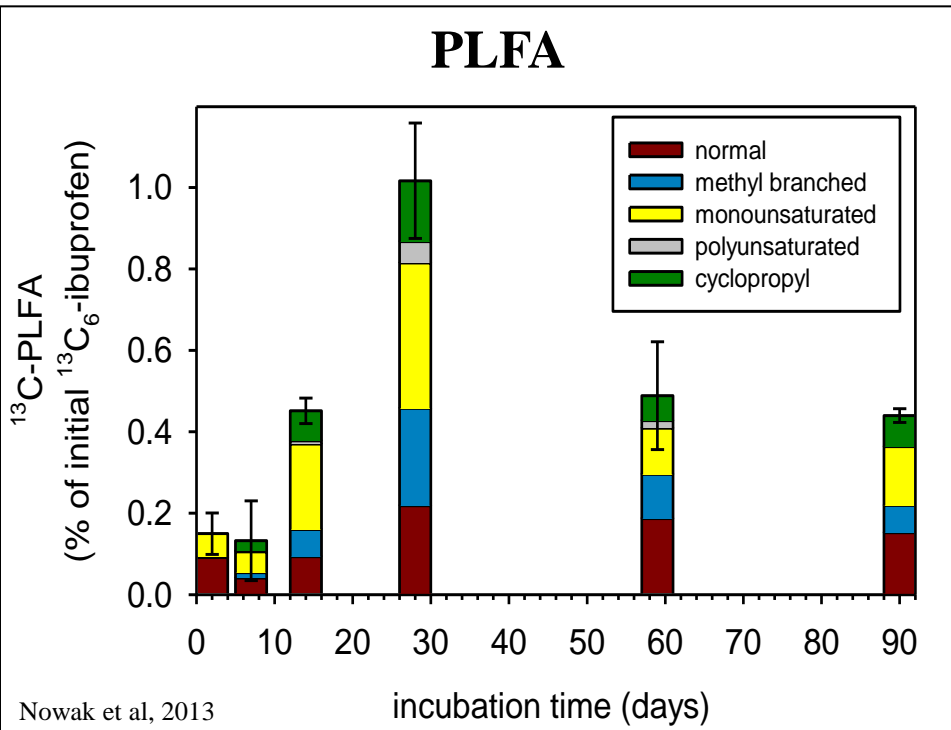

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- G^- markers: initial degraders
- G^+ markers: later phase
- Starvation marker: \uparrow over time

- Aspartate: initially \rightarrow CO_2 fixation
- diverse bioAA: later phase

CALCULATION OF TOTAL BioNER

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

*Cupriavidus
necator* JMP 134

$^{13}\text{C}_6$ -2,4-D

- ^{13}C in **PLFA** and **bioAA**
- Total ^{13}C in biomass

GC/MS;
EA-C-IRMS
GC-C-IRMS

Incorporation of ^{13}C into the biomass of *C. necator* grown on $^{13}\text{C}_6$ -2,4-D

Name	Incubation time (days) [% of $^{13}\text{C}_6$ -2,4-D]			
	2	3	7	14
Biomass	9.2 (\pm 1.5)	10.0 (\pm 1.5)	14.5 (\pm 1.8)	17.4 (\pm 0.06)
PLFA	0.5 (\pm 0.02)	0.6 (\pm 0.01)	0.8 (\pm 0.05)	0.6 (\pm 0.04)
bioAA	4.7 (\pm 0.2)	6.1 (\pm 0.3)	7.3 (\pm 0.2)	8.1 (\pm 0.4)
Biomass/PLFA	18.4	17	18	29
Biomass/AA	1.9	1.6	2	2.1

Conversion factor of ~ 2 for tAA (proteins)

tFA instable (Nowak et al, 2011)! THUS tAA \rightarrow calculation

^{13}C -MASS BALANCE ($^{13}\text{C}_6$ -IBU)

INTRODUCTION

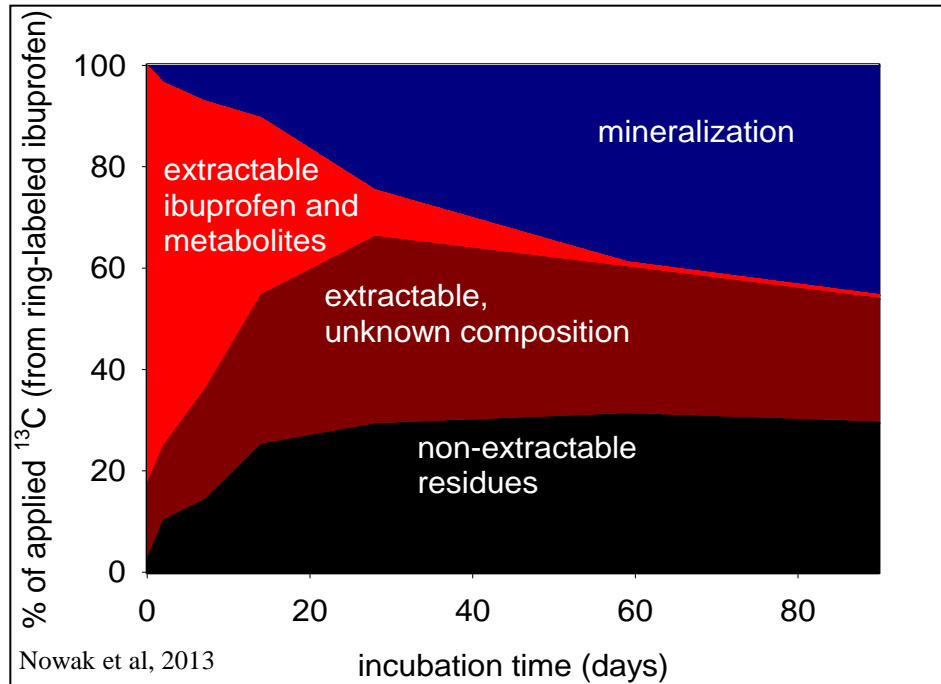

EXPERIMENTAL

RESULTS

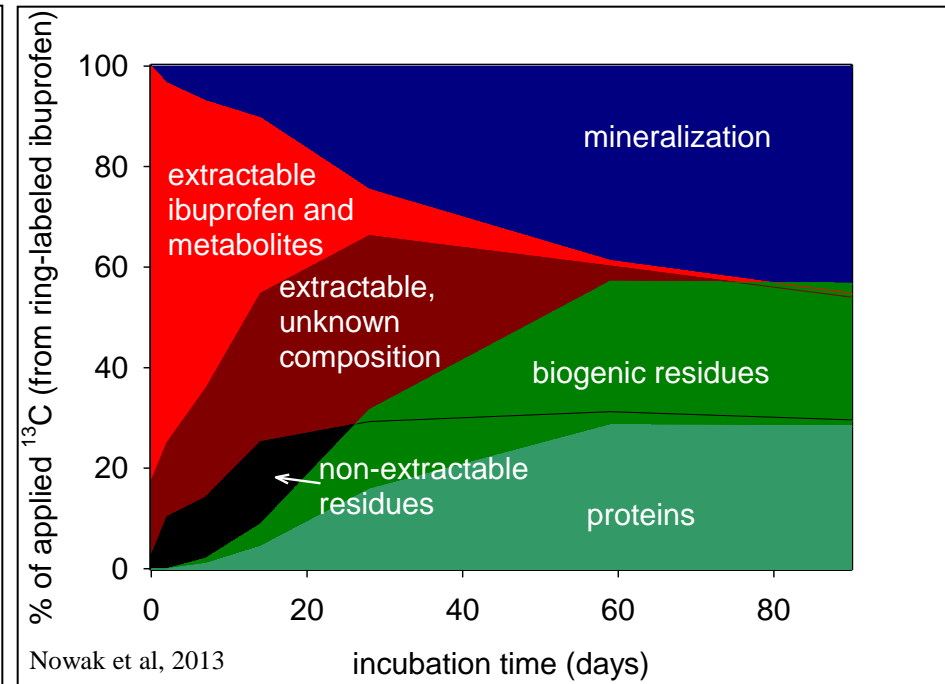

CONCLUSIONS

PLANS...

General mass balance

New mass balance incl. BioNER

- extractable (unknown composition): bioNER?

Nearly all NER biogenic!

BioNER FROM CO₂ FIXATION

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

CO₂ FIXATION EXPERIMENT

INTRODUCTION

EXPERIMENTAL

RESULTS

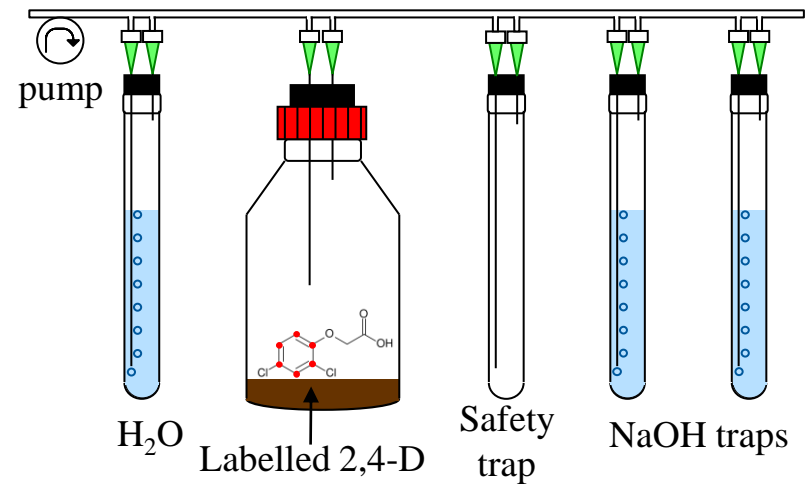

CONCLUSIONS

PLANS...

¹³CO₂ experiment

¹³C₆-2,4-D experiment

¹³C-LABEL ANALYSES

BIONER analyses

• Living biomass:
(PLFA)

GC/MS;
GC-C-IRMS

INCORPORATION OF ^{13}C INTO PLFA

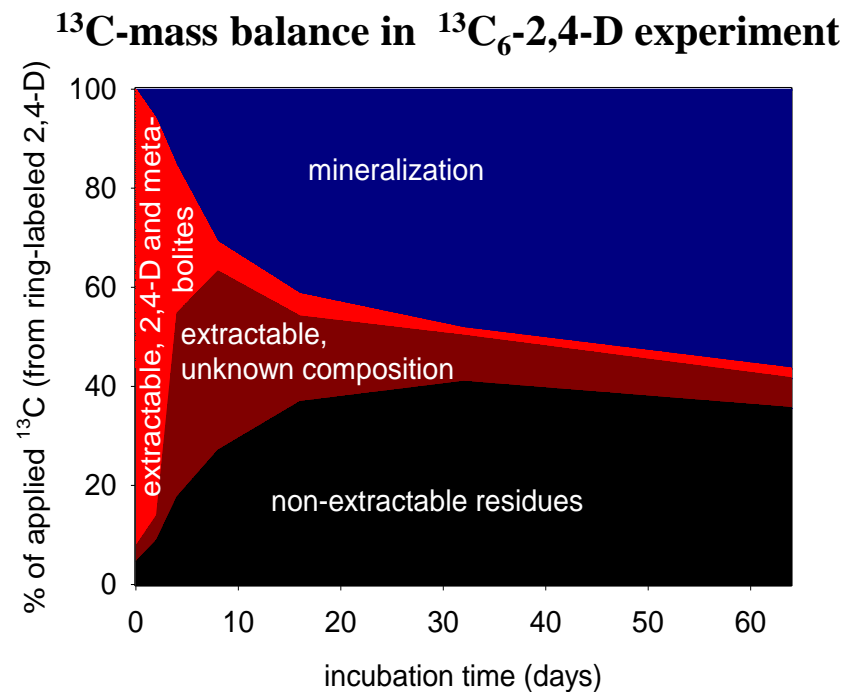

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- $^{13}\text{CO}_2$ fixation (day 16)
- PLFA: decline

^{13}C IN PLFA CLASSES

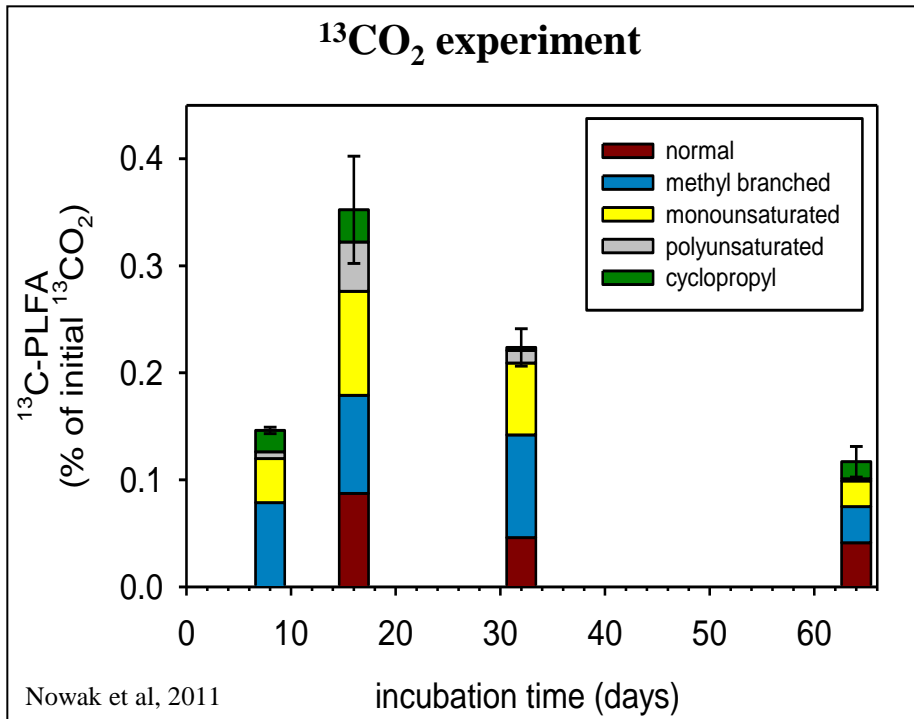

INTRODUCTION

EXPERIMENTAL

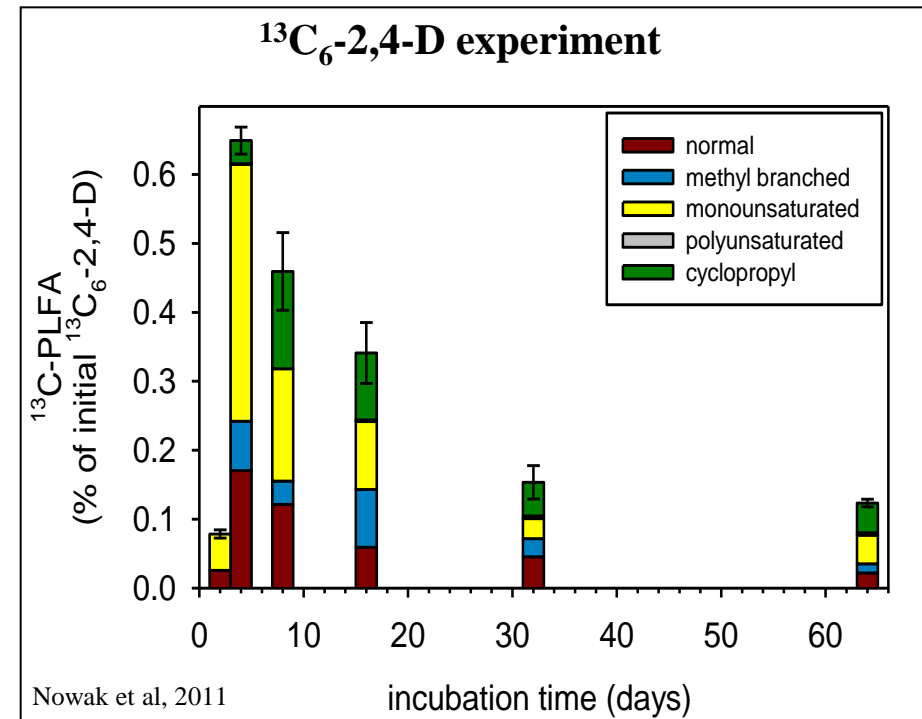

RESULTS

CONCLUSIONS

PLANS...

• G^+ markers: initially

• G^- markers: initially

FINAL REMARKS

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- NER from $^{13}\text{C}_6$ -IBU biogenic = **no risk!**
- NER in abiotic soil low
- tAA high
- bioNER from xenobiotic and CO_2

HOWEVER:

- no biodegradation → xenobiotic NER
- bioNER → biodegradation ($\uparrow\text{CO}_2$) → SOM formation

SOM FORMATION

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

FINAL REMARKS

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- NER from $^{13}\text{C}_6$ -IBU biogenic = **no risk!**
- NER in abiotic soil low
- tAA high
- bioNER from xenobiotic and CO_2

HOWEVER:

- no biodegradation → xenobiotic NER
- bioNER → biodegradation ($\uparrow\text{CO}_2$) → SOM formation

AND:

- **Biotic vs abiotic NER formations (3 types of NER)!**

NER CLASSIFICATION

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- **type I: sequestered NER:**

- reversible
- remobilisation → risk for the environment

- **type II: chemically bound (covalent bonding)**

xenobiotic binding

- irreversible
- low risk for environment

- **type III: bioNER**

- biomolecules (amino acids, fatty acids) → SOM
- no risk

ABIOTIC vs BIOTIC NER FORMATION

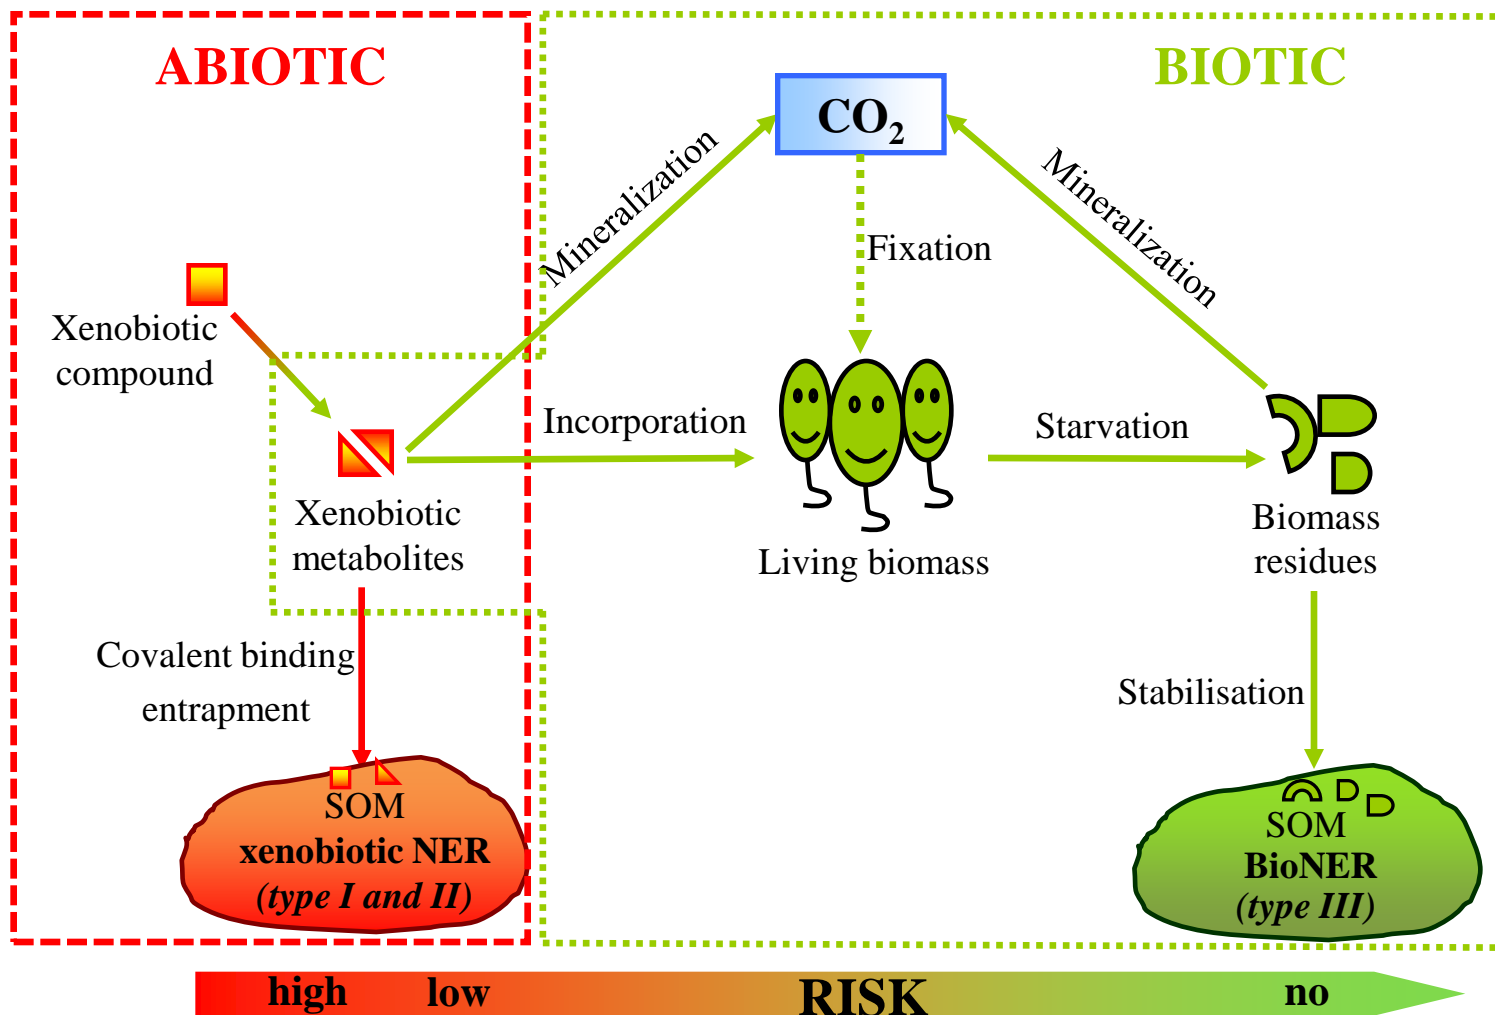

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

FURTHER RESEARCH

INTRODUCTION

EXPERIMENTAL

RESULTS

CONCLUSIONS

PLANS...

- BioNER from other contaminants
(different structure, slower degradation)
- AA: 50%, FA: 5% of BioNER: other components?
- New risk assessment including bioNER formation

**THANK YOU FOR
YOUR ATTENTION!**

EXTRACTION OF BIONER

FATTY ACIDS

- **Living biomass:**
(PLFA)

Extraction:
PB/MeOH/CH₃Cl
(0.8/2/1, v:v)

- **Phospholipids (PLFA)**
- Neutral lipids
- Glycolipids

Purification: silica gel ⇒ PLFA
(CH₃Cl, ACN, MeOH)

Derivatization:
MeOH/TMCS; 9:1, v:v

- **Total in soil:**
(non-living + living biomass:
tFA and tAA)

Derivatization:
(MeOH/TMCS; 9:1, v:v)

Purification: silica gel
(diethyl ether)

**GC/MS;
GC-C-IRMS**

AMINO ACIDS

- **Living biomass:**
(bioAA)

Biomass extraction:
chelating cation exchange resin+
sodium deoxycholate/Polyethylenglycol 600
(0.1%/2.5%)

Hydrolysis: 6M HCl, 110°C

Purification: DOWEX 50W-X8
(oxalic acid, 0.01M HCl, H₂O, 2.5M NH₄OH)

Derivatization:
(Isopropanol/acetylchloride;
DCM/Trifluoroacetic acid anhydride)

Purification:
(PB:CH₃Cl)
