## 1 Introduction

Germany, as well as the European Union and its other Member States, has signed the UNECE Protocol on PRTRs and thus committed itself to establish a national Pollutant Release and Transfer Register (PRTR) open to the public. In Germany, it was established based on the European PRTR Regulation (EG) 166/2006 and the German Law on PRTR (SchadRegProtAG). The PRTR compiles annual releases of pollutants into air, water and land, the off-site transfers in waste water and the off-site transfer of hazardous and non-hazardous waste from certain industrial activities. A report about these releases becomes due if the applicable capacity thresholds as well as thresholds for releases or waste are exceeded. If no threshold is given in the E-PRTR Regulation (see Annex A), reporting for this pollutant is not required. The E-PRTR Regulation lists a total of 91 pollutants. German PRTR data are regularly published on the Internet [www.thru.de](http://www.thru.de).

The present volume contains a compact overview for each pollutant listed in the Regulation if at least one facility reported releases or transfers in the current reporting year.

For each pollutant, the information is summarized in one table and two figures, grouped by releases to air, water and land and the off-site transfers in waste water. (Releases to land are defined only as a pollutant being disposed of by land treatment or deep injection.) The table shows how the total amount of each pollutant is divided into industrial sectors and the number of reporting facilities for the most recent reporting year. The first figure illustrates the number of facilities as time series, divided into industrial sectors. The second figure shows how releases and off-site transfers in waste water have developed over time, also divided into industrial sectors. Both figures contain the five sectors (max.) with the highest amounts of pollutants reported for the most recent reporting year.

Further comprehensive information about the German PRTR can be found on the web site [www.thru.de](http://www.thru.de), where the complete dataset for all reporting years since 2007 can also be downloaded as SQLite database and as *xlsx*, *xlsb*, *csv* or *ods* files. Information about the European PRTR is available at [industry.eea.europa.eu](http://industry.eea.europa.eu).

This volume is updated regularly as new data becomes available. Please send questions or feedback to [mail\(at\)thru.de](mailto:mail(at)thru.de).

The information on the off-site transfer of hazardous and non-hazardous waste in PRTR is presented in a separate volume and is also available for download at [www.thru.de](http://www.thru.de).
