

Final energy productivity

Final energy consumption in relation to gross domestic product (GDP)

1990 = 100

- Final energy productivity
- Final energy consumption
- Final energy productivity - projected development according to the Energy Concept*
- GDP price-adjusted, linked

* 2017 and 2018 preliminary figures

** The projected development is based on the climate protection targets pointed out in the Energy Concept 2010 published by the Federal Government. According to that final energy productivity should rise by 2.0 % annually between 2008 and 2011 and by 2.1 % from 2012 onward. Therefore, the target value is 325.2 in 2050.
