Effect analysis: what has a great climate effect?

Possibility analysis: where can procurement influence

Miljöspendanalys

– Beskrivning av en metod för att integrera
klimatpåverkan i allmänna inköpsanalyser

RAPPORT 2019:4

Environmental Spend Analysis

- ▶ Method for analyzing the climate impact of purchases
- ▶ Integrates environmental effects in a standard spending analysis
- ▶ It provides an opportunity to quantitatively indicate the environmental impact that different purchases have
 - ▶ Climate impact (measured as greenhouse gas emissions)
 - ▶ Emissions of inhalable harmful particles
 - ▶ Land use change

Criteria for sustainable public procurement

Sustainability criteria

Procurement is a financial instrument that local governments hold which can be used to achieve environmental and other public policy goals. In our criteria library you can find proposals for environmental and social requirements to be used when purchasing goods, services and work contracts. There are three levels of environmental criteria; basic, advanced and spearhead. They are voluntary and free to use.

Select product area
