## German Environmental Survey for Adults – GerES VI

Munich, TT.MM.JJJJ  
◁IDNR▷

### Invitation Reminder

Dear participant,

A few days ago, we sent you an invitation to participate in the German Environmental Survey for Adults – GerES VI. Perhaps you have not yet had the opportunity to respond to our invitation. Today, we would therefore like to ask you again for your response about participating.

This survey will enable us to collect valuable data on pollution levels by conducting tests for environmental pollutants throughout Germany. You were chosen to be part of this survey in your area of residence!

The tests are scheduled at your home. For example, we would like to take drinking water samples and go through a questionnaire with you. You can also find more information about the survey in the survey information and consent form that were enclosed with our first invitation letter.

In the week from

**«first day of week» to «last day of week»**

we will be on-site and would like to reserve your preferred date for you. Please make an appointment for your participation in the survey with the staff manning the GerES hotline operated by Telquest GmbH

- on the freephone number **0800 1121 139**
- or by e-mail to **[GerES@telquest.de](mailto:GerES@telquest.de)**

We are happy to call you back. You are welcome to contact us, even if you still have questions or do not want to participate in the survey.

If we do not receive a response from you in the next few days about whether you would like to participate in the survey, we will try to explain the participation options to you during a personal visit.

Participation is free of charge. Upon request, you will receive an environmental medical assessment of the pollutant readings detected in your body and your household. You will receive a total of 30 euros as a small thank-you for participating.

The results of the survey will enable us to investigate correlations between environmental pollution and health, and therefore help to protect the population from substances that are harmful to health. Please join us and support this important research project!

We look forward to your participation.

Kind regards

Dr. Marike Kolossa-Gehring
